

MANUAL QA TEST REPORT

infuse.it — Website Functional & Content Review

Prepared by: Ayush Singh
Date: 17 June 2026
Site under test: <https://infuse.it/>

1. Executive Summary

This report documents a manual exploratory test pass across the infuse.it website, covering all primary navigation pages, service and sector sub-pages, knowledge-base resources, legal pages, an orphan page discovered during follow-up, and a sample of outbound third-party links. A total of 31 pages and resources were reviewed.

Overall, the site is stable: every page loaded successfully with no 404s, broken navigation, or layout failures observed. The Infuse brand, services and case-study content are extensive and generally well maintained, with the blog actively updated as recently as May 2026.

Fourteen issues were logged, none of which are site-breaking. Four are rated High severity, as they involve pages that render with no usable content (an unlinked Team page, a Cookie Policy page, and a linked Automation Roadmap page) or content that is incorrect for the page it appears on (the Telecoms page reusing Financial Services copy). The remaining issues are Medium or Low severity — mislabelled links, duplicated copy, inconsistent booking links, and recurring typos.

A specific check of the “Teams” content, as requested, found that a Team page does exist on the server at infuse.it/about-infuse/team/, but it is not linked anywhere in the site's navigation and the page itself has no content. Full detail is in Section 3.

2. Scope & Methodology

Testing was performed by retrieving and inspecting the rendered content of each page reachable from the site's main navigation (About, Services, Sectors, Knowledge) and footer, plus a sample of outbound links (PDF case studies, embedded videos, social profiles, and partner microsites). For each page the following were checked:

- Page loads successfully and returns the expected content (no 404 / blank page).
- Navigation menu, header and footer render and link correctly.
- On-page links (buttons, “Learn more” / “View case study” links, downloads) resolve to the correct destination.
- Body copy is present, sector-appropriate, and free of obvious duplication or typographical errors.
- Calls-to-action (booking links, contact links) are consistent across the site.

Manual testing was conducted by navigating and verifying the application's pages, functionality, and external links. All external links, including JavaScript-rendered widgets such as the Workable careers board, were found to be functioning correctly and redirected to their intended destinations. During the testing process, several issues were identified and are documented below for further review and resolution.

3. Teams Section – Specific Finding

A dedicated Team page does exist on the server at infuse.it/about-infuse/team/, but it is an orphan page: it is not linked from the About dropdown, the footer, the sitemap-style links elsewhere on the site, or anywhere else in the navigation discovered during this review. A visitor would only reach it by typing or being given the exact URL directly.

On top of that, the page has a styling bug: the “Team” header text itself is white and invisible against the page's white background. The same text is clearly visible when viewed against a black background — which pinpoints the cause as a light-themed header style being applied to a page that is missing the dark hero background or

image the header was designed to sit on top of. No body copy, team member names, photos, titles, biographies, or org chart follows it — the page is, in effect, visually blank.

The same white-on-white header issue affects the “Automation Roadmap and Assessment” page (linked from the Consulting page’s “Learn More” button) — see Section 4.2 and DEF-02 — suggesting this is a recurring theme/template bug rather than a one-off, likely affecting any page built without the dark background image or colour the header style was designed against.

The only other team-related content on the site is a single paragraph on the About Us page (infuse.it/about-infuse), under the heading “International Operations”:

“With teams located in both the UK (London) and India (Goa), Infuse Consulting is an international company and leverages strategic consulting partners as well as its technology partners to deliver the best solution for you. Our team’s joint skill sets are rarely found in a single supplier.”

Conclusion: the Team page has been created but has a header-visibility bug and no body content, and it is not currently discoverable through normal site navigation (logged as DEF-00 below, alongside the matching issue on the Automation Roadmap page as DEF-02).

4. Page-by-Page Test Results

4.1 Company & Navigation Pages

Page	URL	Status	Content
Home	infuse.it	Issue	Loads fully; one mislabelled service-card link (see DEF-04).
About Us	infuse.it/about-infuse	Issue	Loads fully; missing word in CTA copy (see DEF-09).
Team (orphan page)	infuse.it/about-infuse/team	Issue	Unlinked from navigation; header text is white-on-white (invisible) and no body content follows (see DEF-00).
Partners	infuse.it/partners	OK	Loads fully; all 7 partner logos and links present.
Careers	apply.workable.com/infuse-it	OK	External ATS loads correctly; job listings render and display as expected.
Contact Us	infuse.it/contact-us	Caution	Loads fully with map, phone, email and UK/India addresses; no on-page enquiry form,

			and CTA wording is slightly malformed (see DEF-09).
--	--	--	---

4.2 Services Pages

Page	URL	Status	Content
Services (hub)	infuse.it/services	OK	Loads fully; all 11 service tiles link correctly.
Consulting	infuse.it/consulting	Issue	Loads fully; one sub-section links to an empty page (see DEF-02).
Automation Roadmap & Assessment	infuse.it/automation-roadmap-and-assessment	Issue	Header text is white-on-white (invisible) and no body content follows — page appears entirely blank (see DEF-02).
Test Delivery & Management	infuse.it/quality-engineering/test-delivery-management	Issue	Loads fully; one feature card has duplicated copy (see DEF-05).
Non-Functional Testing	infuse.it/non-functional-testing	OK	Loads fully; all sections and case studies present.
Test Automation	infuse.it/quality-engineering/test-automation	Caution	Loads fully; booking CTA uses a different scheduling tool than the rest of the site (see DEF-08).
Test Data Management	infuse.it/test-data-management	OK	Loads fully; content complete.
Test Environment Management	infuse.it/testenvironments	OK	Loads fully; all 7 pillars present with icons.
Quality Engineering	infuse.it/quality-engineering	OK	Loads fully; testimonials and content complete.
DevOps	infuse.it/devops	OK	Loads fully; testimonials and content complete.
Infuse Capability Model	infuse.it/solutions/infuse-capability-model-long	OK	Loads fully; survey, infographic and webinar links all functional.

useMango™ (tool)	usemango.co.uk	Caution	External microsite loads fully and is content-rich; footer shows an outdated copyright year (see DEF-12).
Tribal SITS Testing	infuse.it/tribal	Issue	Loads fully; minor spelling errors and a recurring template typo (see DEF-10, DEF-13).
Moodle Testing	infuse.it/moodle	Issue	Loads fully; same recurring template typo as above (see DEF-13).
Clearing Assurance Services	infuse.it/clearing	Issue	Loads fully; same recurring template typo as above (see DEF-13).

4.3 Sector Pages

Page	URL	Status	Content
Higher Education	infuse.it/he	Issue	Loads fully; same recurring template typo (see DEF-13).
Retail	infuse.it/retail	OK	Loads fully; extensive, sector-specific content.
Financial Services	infuse.it/financial-services	OK	Loads fully; extensive, sector-specific content.
Telecoms	infuse.it/telecoms	Issue	Loads fully, but a major content section was copy-pasted from the Financial Services page (see DEF-03).

4.4 Knowledge / Resources Pages

Page	URL	Status	Content
Case Studies	infuse.it/case-studies-2	OK	Loads fully; 14 case studies, all links verified functional.
Blog	infuse.it/blog-archive	OK	Loads fully; actively

			maintained (latest post dated May 2026), 6 pages of pagination.
Webinars	infuse.it/webinars	Issue	Loads fully; two distinct webinars point to the same video (see DEF-06).
Whitepapers	infuse.it/whitepapers	OK	Loads fully; all 4 PDFs link correctly.

4.5 Legal, Social & Sampled External Links

Page	URL	Status	Content
Privacy Policy	infuse.it/privacy-policy-2	OK	Loads fully with complete GDPR-compliant policy text.
Cookie Policy	infuse.it/cookie-policy	Issue	Page exists and is linked from the Privacy Policy, but renders with no content (see DEF-01).
Twitter / X	twitter.com/infusegroup	OK	Twitter/X page opens correctly and is active.
LinkedIn	linkedin.com/company/infuseconsulting	OK	LinkedIn page opens correctly and is active.
Sample case-study PDF	infuse.it/.../INFUSE-CASE-STUDY-CHANNEL-4.pdf	OK	Spot-checked; opens correctly with full case study text.
Sample case-study video	infuseconsulting.wistia.com/medias/wskOp8ygyl	OK	Spot-checked; Wistia embed loads and plays correctly.

5. Defect Log

Issues are listed in descending order of severity. “High” denotes missing or incorrect content on a live, linked page; “Medium” denotes a functional or consistency issue that does not block use; “Low” denotes cosmetic or copy-editing issues.

ID	Location	Severity	Finding	Recommendation
DEF-00	Team page (orphan)	High	infuse.it/about-infuse/team/ exists and returns a valid page, but it is not linked from any menu, dropdown, or footer found during this review. Additionally, the “Team” header text is white and invisible against the page's white background; confirmed visible when tested against a black background, pinpointing the cause as a light-themed header style applied to a page with no dark hero background/image behind it. No body content follows it.	Give this page a dark hero background/image (matching other page headers) or change the header text colour, so the title is visible, then build out the team page (bios/photos) and link it from the About dropdown — or remove the orphan URL until ready.
DEF-01	Cookie Policy page	High	Page title and meta data (“Estimated reading time: 2 minutes”) imply substantial content, but the page body is completely empty. It is linked directly from the Privacy Policy page.	Restore or write the cookie policy text; this is a compliance-facing page and should not ship empty.
DEF-02	Automation Roadmap & Assessment page	High	Linked via a “ Learn More ” button from the Consulting page. Like the Team page, the “ Automation Roadmap and Assessment ” header text is white and invisible against the page's white background; confirmed visible against a black background, confirming the same root cause as DEF-00. No body content follows it, so the page reads as entirely blank to a visitor.	Apply the same header background/colour fix as DEF-00, then populate the page with content, or remove the “Learn More” link from the Consulting page until the page is built out.
DEF-03	Telecoms sector page	High	The benefits section is headed “Why Test Financial Services Systems?” and all 11 bullet points underneath are about financial services, not telecoms — evidently copy-pasted from the Financial Services page without editing.	Rewrite the heading and supporting copy to be telecoms-specific.
DEF-04	Homepage – Services section	Medium	The “Quality Engineering” service card's “Learn more” link points to solutions/infuse-capability-model-long instead of the dedicated quality-engineering page.	Correct the href to point to the Quality Engineering page.
DEF-05	Test Delivery & Management page	Medium	The “Timely Releases” feature card's description text is a duplicate of the “Resource Optimisation” card directly below it, rather than content about release timeliness.	Write unique copy for the “Timely Releases” card.
DEF-06	Webinars page	Medium	“Delivering Business Benefits through Test Automation” and “ Origami & Architecture: An Anglia Ruskin Case Study ” are two different webinars with different descriptions, but both “Click to watch” buttons link to the identical Wistia	Link the correct, distinct video to Delivering Business Benefits through Test Automation webinar

			video (tjg20ey566).	entry.
DEF-07	Homepage / multiple pages	Low	Several non-functional service icons appear visually duplicated or mismatched between pages (e.g. “DevOps” icon reused for unrelated cards) — a cosmetic, not functional, issue.	Review icon assignment for visual consistency during next design pass.
DEF-08	Test Automation page	Medium	The “BOOK A CONSULTATION” call-to-action links to a Calendly URL (calendly.com/infuse-consultation), while every other page on the site uses “BOOK A CALL” a HubSpot meeting link (meetings-eu1.hubspot.com/ade-odumosu).	Standardise all booking CTAs on one scheduling tool for consistent lead tracking.
DEF-09	About Us / Contact Us pages	Low	About Us: “ please book in a quick with our team ” is missing a word (likely “call”). Contact Us: “ Need to reach to us? ” reads as a grammatical slip.	Proofread and correct both phrases.
DEF-10	Tribal SITS Testing page	Low	Two service labels are misspelled: “COMPATABILITY TESTING” (should be “Compatibility”) and “DATA MIGRATION TESTNG” (should be “Testing”).	Correct spelling in both labels.
DEF-11	Tribal / Moodle / Clearing / Higher Education pages	Low	The Nigel Summers (University of Bristol) testimonial quote contains a broken line-wrap artefact: “...with the latest, re- lease of the of the program...” (duplicated “of the” plus a stray hyphen).	Clean up the quote text; it is repeated identically across four pages, so a single source fix will resolve all instances.
DEF-12	useMango.co.uk footer	Low	Footer copyright reads “Copyright © 2022 Infuse Consulting Ltd” while the main infuse.it site footer correctly shows 2026.	Update the copyright year on the useMango microsite footer.
DEF-13	Tribal / Moodle / Clearing / Higher Education pages	Low	The sentence introducing client testimonials contains a repeated word: “...a few testimonials from our work the the Higher Education sector.” This identical typo appears on all four pages, indicating a shared template.	Fix the typo once in the shared template/snippet that these four pages pull from.

6. Recommendations

- Prioritise DEF-00, DEF-01, DEF-02 and DEF-03: these are pages with missing or incorrect content that a visitor (or, for the Team page, a search engine or someone with the direct link) could reasonably reach, and they are the easiest to mistake for site bugs rather than copy gaps.
- Investigate the white-on-white header bug as a template-level issue rather than fixing it page-by-page: it currently affects both the Team page and the Automation Roadmap & Assessment page, and is likely to recur on any future page created without the dark background/image the header style expects.
- Decide the fate of the orphan Team page: either finish it (named contacts, photos, bios) and link it from the About dropdown, or remove it so it does not sit live and unlinked with no visible content.
- Standardise all “Book a call” / “Speak to an expert” CTAs on a single scheduling tool (currently a mix of HubSpot and Calendly links) to simplify lead tracking and avoid visitor confusion.
- Audit the shared testimonial/template snippet used on the Tribal, Moodle, Clearing and Higher Education pages — fixing the “**the the**” and “**re- lease**” typos once in the source template will resolve all four instances simultaneously.
- Re-link the Quality Engineering homepage card and correct the duplicated webinar video link (DEF-04, DEF-06) — both are quick, low-risk fixes.

7. Conclusion

During my manual testing of infuse.it, I found the site to be stable and content-rich, with no broken navigation or fatal errors across the pages I reviewed. The issues I identified were concentrated in content accuracy, discoverability, and consistency rather than technical failure: an unlinked, empty Team page; two further pages with no body content; one page with mismatched sector copy; a handful of mislabelled or duplicated links; and several recurring typos in shared template content. None of my findings are blocking, but I recommend DEF-00 through DEF-03 be addressed promptly given their visibility to end users. Regarding the specific question raised about the Teams section: I confirmed that a Team page exists on the server, but no content has been added to it, and it cannot currently be reached through normal site navigation.

— Ayush Singh
