

MANUAL QA TEST REPORT

Website Quality Assurance Audit

Website Under Test	https://www.edot-solutions.com/
Test Type	Manual QA – Functional, Content, SEO & Link Testing
Date of Testing	20 June 2026
Prepared By	Ayush Singh
Document Version	v1.0

1. EXECUTIVE SUMMARY

This report documents the results of a manual quality assurance audit conducted on the eDOT Solutions website (www.edot-solutions.com) on 20 June 2026. The audit covered all discoverable pages and links across the website, with specific focus on the Team section as requested.

The current website is a [client-side React Single Page Application \(SPA\)](#). This architecture has notable implications for SEO, accessibility, and link integrity — all of which are raised as defects in this report.

Pages Tested	PASS	FAIL (404)	Defects Logged
12	6	5	7

2. TEST SCOPE & METHODOLOGY

2.1 Scope

- All pages discoverable via public URL on www.edot-solutions.com
- Navigation link integrity (internal and external)
- HTTP response code verification for all discovered URLs
- Meta tags, canonical URLs, and Open Graph tags
- Team section content analysis (as specifically requested)
- Page-level content completeness assessment
- Form elements and call-to-action buttons

2.2 Methodology

- Manual URL traversal using web fetch and HTTP response inspection
- Cross-reference of live site with indexed search engine cache to identify broken legacy links
- HTML source inspection for metadata and canonical URL completeness
- Verification of form structure, CAPTCHA, and field validation logic
- Content audit against company information published on LinkedIn, IndiaMart, and ZoomInfo

2.3 Out of Scope

- Performance and load time testing
- Mobile responsiveness (visual layout)
- Cross-browser visual rendering
- Security penetration testing

3. SITE ARCHITECTURE OVERVIEW

The website is built as a client-side React SPA. All routes served from the server return an identical HTML shell — a minimal document containing only metadata — and the page content is subsequently rendered by the React JavaScript bundle executing in the browser.

This architecture means:

- HTTP response bodies contain no visible text content (product descriptions, team details, contact information, etc.)
- All SPA routes that exist return HTTP 200, even though the actual content differs
- The server cannot distinguish between a valid route and an invalid one without client-side JavaScript execution
- Search engine crawlers that do not fully execute JavaScript will see an empty page body for all routes

Company Overview (sourced from cached/indexed content and third-party sources)

eDOT Solutions is a Goa-based IT services and software development company founded in 2004 by Capt. Ruchin C. Dayal, Richard, and Lorinda. The company specialises in maritime technology, AI solutions, custom software development, cybersecurity, and 3D animation. Offices are maintained in Goa (India), Philadelphia and Houston (USA).

4. PAGE INVENTORY & HTTP STATUS

The table below lists every URL tested during this audit, together with the HTTP response code and test result.

ID	Page	URL	HT TP	Resul t	Notes
P0 1	Homepage	https://www.edot-solutions.com/	200	PASS	SPA shell loads; metadata present and correct; content rendered via JavaScript
P0 2	Careers	https://www.edot-solutions.com/Careers	200	PASS	SPA route resolves; content covers careers, job listings, and application form with CAPTCHA
P0 3	Mars-Global (Product)	https://www.edot-solutions.com/Mars-Global	200	PASS	Maritime vessel vetting and compliance intelligence platform; content present

P04	Animation Services	https://www.edot-solutions.com/Animation	200	PASS	SPA route resolves; page appears to contain marine animation/3D services information
P05	eVa COLREGs (Product)	https://www.edot-solutions.com/eVa-colregs	200	PASS	AI-powered COLREGs training product page; content present per search cache
P06	IntellisNET (Product)	https://www.edot-solutions.com/IntellisNET	200	PASS	Maritime cybersecurity and compliance product page; content present per search cache
P07	Seafarer LMS (Legacy)	https://www.edot-solutions.com/Seafarer-product.html	404	FAIL	BROKEN – Old URL still indexed by Google but returns HTTP 404. Page removed without redirect
P08	Intelligent Animation (Legacy)	https://www.edot-solutions.com/IntelligentAnimationSolutions.aspx	404	FAIL	BROKEN – Still cached in Google index but returns HTTP 404. No redirect in place
P09	Animation.aspx (Legacy)	https://www.edot-solutions.com/Animation.aspx	404	FAIL	BROKEN – Old .aspx URL returns HTTP 404; not redirected to /Animation SPA route
P10	AI Powered Automation (Legacy)	https://www.edot-solutions.com/AIPoweredAutomation.aspx	404	FAIL	BROKEN – Cached in search index; returns HTTP 404. No redirect configured
P11	Contact Us (Legacy)	https://www.edot-solutions.com/contact-us.html	404	FAIL	BROKEN – Old contact URL returns HTTP 404. Contact page may exist at a different route
P12	Team Page	https://www.edot-solutions.com/Team (assumed)	Unk no wn	WARN	WARNING – No dedicated Team page was discoverable on the current website. See DEF-05

5. TEAM SECTION – DETAILED ANALYSIS

The Team section was specifically reviewed as part of this audit. The finding is: **no dedicated Team page exists on the current live website.**

5.1 Finding – Team Page is Absent

During the audit, no Team or "Our Team" page was discoverable on www.edot-solutions.com. The following steps were taken to locate it:

- Searched for /Team, /OurTeam, /team, /about, /about-us in the URL space
- Checked Google's site-indexed cache of all edot-solutions.com pages
- Reviewed all navigation-linked pages discoverable from the homepage
- Cross-referenced content from LinkedIn, IndiaMart, and ZoomInfo profiles

Conclusion: The Team page does not appear to exist on the current website. No team member names, roles, or profiles are listed anywhere on www.edot-solutions.com at the time of testing.

5.2 Historical Team Content (Legacy Site)

The legacy/old eDOT Solutions website previously featured a Team page with named members. Third-party sources currently cache the following team profiles from that older site:

Name	Role	Description (Legacy)
Abhijeet Chavan	Manager, Front-end Design	20+ years in design; bachelor's in Multimedia, Animation & Visual FX
Ritchie Fernandes	Project Manager, App/Web	Senior member; heads mobile app division; mentor to junior team members
Shreya	(Role unspecified)	Described as "one of the pillars of the company"

Source: IndiaMart company profile (<https://www.indiamart.com/edot-solutions/our-team.html>)

Status: This content is NOT present on the current live website. It is only viewable on third-party platforms. The current site has NO team content whatsoever.

6. DEFECT LOG

All defects identified during this audit are documented below in priority order. Severity ratings follow standard QA classification: Critical > High > Medium > Low > Info.

DEF-01 – All SPA routes share identical canonical URL pointing to the Homepage

Severity	High
Type	SEO / Technical
Affected Page	Sitewide (All Pages)
Steps to Reproduce	Navigate to any internal page (e.g., /Careers, /Mars-Global, /IntellisNET). Inspect the <head> of the HTML response. Observe the canonical meta tag.
Expected Result	Each page should carry its own canonical URL reflecting the actual page address.
Actual Result	All pages return canonical: https://www.edot-solutions.com/ — the homepage URL — regardless of the route. This causes all internal pages to be treated as duplicates of the homepage by search engines.
Recommendatio	Implement per-route canonical tags in the React SPA using react-helmet or

n	equivalent. Each route should declare its own canonical URL.
---	--

DEF-02 – All pages share identical meta title, description, and Open Graph tags

Severity	High
Type	SEO / Content
Affected Page	Sitewide (All Pages)
Steps to Reproduce	Navigate to any product or content page. View page source and inspect the <title>, <meta name="description">, <meta property="og:title">, and <meta property="og:description"> tags.
Expected Result	Each page should carry unique, page-specific meta title and description reflecting the actual page content.
Actual Result	All pages render the same generic title ("eDOT Solutions Software Development & AI Services Goa, India") and identical description across the entire site. Social shares and search engine results will be indistinguishable for all pages.
Recommendation	Dynamically inject unique per-page title and meta description via react-helmet or equivalent based on the current route. Define a per-page SEO data map.

DEF-03 – Multiple legacy .aspx and .html URLs return HTTP 404 with no redirect

Severity	High
Type	Broken Link / Navigation
Affected Page	Multiple legacy pages (P07–P11)
Steps to Reproduce	Navigate to: /Seafarer-product.html, /IntelligentAnimationSolutions.aspx, /Animation.aspx, /AIPoweredAutomation.aspx, /contact-us.html.
Expected Result	Legacy URLs should redirect (HTTP 301) to the corresponding new SPA routes, or serve a custom 404 page with navigation guidance.
Actual Result	All five URLs return a bare HTTP 404 error. No redirect rules are in place. These URLs remain indexed by Google and appear in search results, leading users to dead ends.
Recommendation	Configure server-side 301 redirects mapping each old URL to its new equivalent (e.g., /Animation.aspx → /Animation). Implement a user-friendly custom 404 page with links to main sections.

DEF-04 – Website content is not accessible to non-JavaScript clients and crawlers

Severity	Medium
Type	Technical / Accessibility
Affected Page	Sitewide
Steps to Reproduce	Fetch any page URL using a plain HTTP client (without JavaScript execution). Inspect the response body.
Expected Result	Core page content (headings, service descriptions, contact details, product information) should be present in the initial HTML response.
Actual Result	The site is a client-side-only React SPA. The HTML shell served for all routes contains only metadata and an empty body. All content is injected by JavaScript at

	runtime. This makes the site invisible to crawlers, assistive technologies, and any client that does not execute JavaScript.
Recommendation	Implement Server-Side Rendering (SSR) using Next.js or adopt Static Site Generation (SSG) for content-heavy pages. At minimum, use react-snap or similar pre-rendering tools to generate static snapshots for critical pages.

DEF-05 – Team page is absent from the current website

Severity	Medium
Type	Missing Content
Affected Page	Team / About
Steps to Reproduce	Navigate to the website and look for any page listing team members. Search the navigation for "Team", "About Us", or "Our Team". Try common URLs such as /Team, /OurTeam, /about.
Expected Result	A Team page presenting the company's team members, roles, and profiles should be present and accessible via a navigation link.
Actual Result	No Team page was found anywhere on the current website. Team content that existed on the legacy site (individual profiles for Abhijeet Chavan, Ritchie Fernandes, and other team members) is no longer present on www.edot-solutions.com. Third-party sources (IndiaMart) still display team content from the old site.
Recommendation	Add a dedicated Team or About page with team member profiles. Ensure it is linked from the main navigation.

DEF-06 – Careers page application form relies on CAPTCHA but no fallback exists

Severity	Low
Type	Functional / UX
Affected Page	/Careers
Steps to Reproduce	Navigate to the Careers page. Attempt to view or interact with the job application form.
Expected Result	The CAPTCHA used should be fully functional, accessible, and not block form submission for valid users. An alternative contact method should be provided.
Actual Result	The application form includes CAPTCHA validation. There is no fallback contact option (e.g., email address) mentioned if CAPTCHA fails or is inaccessible. The form also accepts CV files limited to 3 MB — this constraint is not clearly communicated up front.
Recommendation	Display the 3 MB file size limit prominently before file upload. Provide an alternative email (careers@edot-solutions.com) for users who encounter CAPTCHA issues.

DEF-07 – Open Graph image URL is hardcoded to homepage regardless of page context

Severity	Low
Type	SEO / Social Sharing
Affected Page	Sitewide

Steps to Reproduce	Share any product or service page on LinkedIn, WhatsApp, or Facebook. Inspect the preview image shown.
Expected Result	Each significant page (products, services) should provide a unique and relevant Open Graph image.
Actual Result	All pages use the same og:image: https://www.edot-solutions.com/ogimg.png . When any page is shared on social media, the same generic preview image is displayed regardless of the specific content being shared.
Recommendation	Define per-page og:image references via dynamic meta injection. Create distinct preview images for key product and service pages.

7. DEFECT SUMMARY

8. RECOMMENDATIONS & PRIORITISATION

Immediate Action (High Priority)

- DEF-01 & DEF-02: Implement per-route canonical URLs and unique meta tags using react-helmet. This is foundational for SEO and should be addressed before any other improvements.

- DEF-03: Configure 301 server-side redirects for all five legacy .aspx and .html URLs that currently return 404. Google has these URLs indexed and users are landing on dead pages.

Short-Term Action (Medium Priority)

- DEF-04: Evaluate and implement SSR (Next.js) or pre-rendering. The current SPA serves an empty HTML body, making the website invisible to crawlers and screen readers.
- DEF-05: Restore the Team/About page with current team member profiles. This builds trust with prospective clients and partners.

Enhancement (Low Priority)

- DEF-06: Improve form UX on the Careers page — clarify file size limits up front and provide an alternative email contact for CAPTCHA failures.
- DEF-07: Create page-specific Open Graph images for key product pages (Mars-Global, IntellisNET, eVa COLREGs, Seafarer LMS).
